

# Parcel Buildability Brief

29 Walnut Street, Arlington, MA 02476

Prepared for Julie Gibson · Prepared on May 26, 2026 · Parcel ID 128.0-0003-0012.0 · Map–Block–Lot 128-3-12

## 1 · EXECUTIVE SUMMARY

Multi-family redevelopment is permissible by-right under the NMF overlay. The 3,023 sf lot — which is non-conforming under R2 — fully qualifies under NMF because the overlay waives lot-size, frontage, FAR, and coverage minimums.

Besides the existing single-family use, the parcel supports the following development paths, ranked by regulatory friction:

| # | Option                                               | Path                                                    | Process                                  | Friction    |
|---|------------------------------------------------------|---------------------------------------------------------|------------------------------------------|-------------|
| 1 | Add an Accessory Dwelling Unit (≤ 700–745 sf)        | Arlington ZBL §5.4 R2 use table (AHA dimensional floor) | By-right                                 | Lowest      |
| 2 | Convert existing structure to a two-family           | R2 base zoning, use-table by-right                      | By-right (existing footprint)            | Low         |
| 3 | Demolish + rebuild as 2–4 unit multi-family          | NMF overlay, §5.8                                       | Site Plan Review by ARB                  | Medium      |
| 4 | Demolish + rebuild as larger multi-family (5+ units) | NMF overlay, §5.8                                       | Site Plan Review + lot-shape constraints | Medium-High |

The existing single-family *essentially maxes out* the R2 envelope. Using the assessor's 1,490 sf total finished area, existing FAR is 0.493 (99% of the R2 cap of 0.50); using the Zillow / Realtor above-grade figure of 1,400 sf, existing FAR is 0.463 (93% of cap). Under either source, by-right expansion under R2 is essentially impossible without a variance. The NMF overlay is the entire reason there is buildable upside on this parcel.

| Centroid (WGS-84)             | 42.4188902 N, −71.1697441 W                                                                                                                 |

**[A] Existing GFA — multi-source reconciliation:** The Arlington Tax Assessor (1,490 sf) reports total finished area, which can include finished basement or attic space. Zillow and Realtor.com both report 1,400 sf, the conventional MLS above-grade figure. The 90 sf gap is within normal assessor-vs-MLS range. ZBA / Inspectional Services use the assessor figure for FAR / dimensional compliance; the brief presents both for transparency. Section 4.1 shows the by-right expansion analysis under both figures — the conclusion (R2 effectively maxed) is identical either way.

**[B] Bath count:** Arlington Tax Assessor lists 1 bath; Zillow, Realtor.com, and Ownerly all list 2 baths. The brief uses 2 as the more current and accurate count — the assessor record likely reflects only full baths or pre-dates a recent half-bath addition. Bath count does not affect any zoning, dimensional, or buildability calculation.

**[C] Lot size — multi-source reconciliation:** Assessor (3,023 sf) and Realtor.com (3,025 sf) report essentially the same legally-taxed area — Realtor sources from assessor records. Zillow (3,049 sf) reports a ~25 sf-higher figure, likely from a different reference snapshot. The Arlington GIS polygon (3,431 sf) includes slivers of right-of-way that are excluded from the taxed area. All compliance calculations below use the assessor figure (3,023 sf), as Arlington Inspectional Services and ZBA use this number for dimensional rulings.

3 · ZONING STACK & DIMENSIONAL COMPLIANCE

The parcel sits under **two** zoning regimes simultaneously. The property owner may elect to develop under either, but not both at once.

3.1 — Base zoning

|                            |                                                                                                  |
|----------------------------|--------------------------------------------------------------------------------------------------|
| Zone code                  | R2 — Two-Family Residence District                                                               |
| Source                     | Arlington GIS, Zoning Districts layer (ZoningId 114) — point-in-polygon match at parcel centroid |
| Permitted residential uses | Single-Family, Two-Family, Home Occupation, Accessory Dwelling Unit                              |

3.2 — Overlay zoning

|             |                                                                                                                            |

| Rear setback          | ~20 ft                      | 20 ft                         | (measure from survey)              | ⚠ Verify from plot plan                                   |
| Min. parking          | 2 / unit                    | 0 / unit (max 1 / unit)       | n/a                                | —                                                         |
| Inclusionary trigger  | n/a (R2 limited to 2 units) | ≥ 6 units → 15% affordable    | n/a (lot constrains to ≤ ~4 units) | ✅ Below threshold                                         |
| Site Plan Review      | Not required for ≤ 2 units  | Required, by ARB (per §5.8.A) | —                                  | —                                                         |

[1] The original draft warrant article specified 4 stories / 46 ft for NMF. Working Group public materials and ARB hearings indicate this was reduced to 3 stories during the adoption process. Current bylaw text should be confirmed; the deliverable assumes the more conservative 3-story figure for envelope calculations in §4 below.

[2] R2's max lot coverage applies only when an underlying R2 development is pursued. Under NMF election, lot coverage is unrestricted (subject only to setbacks).

Sources: Arlington Zoning Bylaw 2024 ed., §5.4 (R2 dimensional table) and §5.8 (NMF overlay), draft warrant text dated August 17, 2023 (final adoption May 8, 2024); MGL c. 40A §3A and EOHLIC Compliance Guidelines.

4 · BUILDABLE ENVELOPE — MATH

The two regimes produce fundamentally different envelopes for this small lot:

4.1 — Under R2 (base zoning)

|                                     |   |                     |                                  |
|-------------------------------------|---|---------------------|----------------------------------|
| Lot size (assessor, regulatory)     | : | 3,023 sf            |                                  |
| R2 max FAR                          | : | 0.50                |                                  |
| Max GFA permitted under R2          | : | $3,023 \times 0.50$ | = 1,511 sf                       |
| Existing GFA — assessor figure      | : | 1,490 sf            |                                  |
| By-right expansion room (assessor): |   | $1,511 - 1,490$     | = 21 sf (FAR 0.493, 99% of cap)  |
| Existing GFA — Zillow / Realtor     | : | 1,400 sf            |                                  |
| By-right expansion room (listing) : |   | $1,511 - 1,400$     | = 111 sf (FAR 0.463, 93% of cap) |

Conclusion: regardless of which source is used, the existing structure is effectively at the R2 floor-area ceiling. Net by-right expansion under R2 is between 21 sf ( $\approx$  a closet) and 111 sf ( $\approx$  a small bathroom). Any meaningful addition under R2 requires a variance from the Arlington ZBA.

The existing single-family is at **93%–99%** of the R2 floor-area cap (depending on which GFA source is used). Under R2, the only by-right options are: (a) keep the structure as-is, (b) interior renovation that doesn't add GFA, (c) add an ADU under Arlington's R2 use table (capped at 700–745 sf — see §5 below; ADU is a separate envelope and does not count against the principal building's FAR cap). Anything else under R2 requires a variance.

4.2 — Under NMF (overlay election)

|                          |   |                                                                                                                            |                       |
|--------------------------|---|----------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Lot size (assessor)      | : | 3,023 sf                                                                                                                   |                       |
| Buildable footprint      | : | $(\text{frontage} - 2 \times \text{side}) \times (\text{depth} - \text{front} - \text{rear})$                              |                       |
|                          | : | $(57 - 10 - 10) \times (60 - 15 - 20)$                                                                                     |                       |
|                          | : | $37 \times 25$                                                                                                             | = ~925 sf footprint   |
|                          | : | (alt. orientation:                                                                                                         | ~880 sf)              |
| Max stories (NMF)        | : | 3 (conservative; bylaw permits up to 4)                                                                                    |                       |
| Max GFA at 3 stories     | : | $925 \times 3$                                                                                                             | = ~2,775 sf           |

|                          | : | $\rightarrow$ minimum 2 units to satisfy density<br>(rounding up per Article 5.8.D affordable housing rounding convention) |                       |
| Max parking allowed      | : | 1 space per unit                                                                                                           |                       |
| Min parking required     | : | 0 spaces per unit                                                                                                          |                       |
| Inclusionary trigger     | : | reached at 6 units                                                                                                         |                       |
|                          | : | (lot capacity caps practical density<br>at 2–4 units; trigger not reached)                                                 |                       |

At a 3-story envelope, the practical unit yield on a 925 sf footprint is **2 to 4 dwelling units**, depending on per-unit size:

| Per-unit GFA | Units | Total GFA | Notes                                                                 |
|--------------|-------|-----------|-----------------------------------------------------------------------|
| ~1,400 sf    | 2     | ~2,800 sf | Two large units stacked / townhouse-style; comfortable family product |
| ~925 sf      | 3     | ~2,775 sf | One unit per floor; flexible 2-bed / 1-bath product                   |
| ~700 sf      | 4     | ~2,800 sf | 1–2 bed product; aggressive but feasible at 3 stories                 |

Per-unit sizes are *analytical* — they reflect lot capacity, not architectural recommendations. A licensed architect/civil engineer would refine based on stair / corridor / utility takeoff.

Sources: Arlington Zoning Bylaw §5.8.C (NMF dimensional controls); EOHLC Compliance Guidelines for §3A (15 du/ac density floor); buildable footprint computed from GIS parcel polygon edges (29 Walnut: 60.3 / 57.2 / 59.0 / 57.8 ft) and adopted setbacks.

[3] ADU is permitted at this address under Arlington Zoning Bylaw §5.4 (R2 use table). The MA Affordable Homes Act (c. 150 of the Acts of 2024, effective Feb 2, 2025) provides statewide preemption for ADUs *in single-family districts only*; in R2, Arlington's local rules govern, but the AHA still imposes a state dimensional floor: ADU size is capped at 900 sf *or* 50% of the principal dwelling, whichever is less. With principal GFA of 1,400–1,490 sf, the binding cap is 700–745 sf.

### 5.1 — Substantive answers to "what besides single-family"

The four options that materially answer the question are **#4, #5, #6, and #8/#9**. Option #5 is the lowest-friction (by-right, structure-only). Options #8 and #9 require commitment to demolition and a Site Plan Review process, but capture the largest equity upside under the NMF overlay. Option #6 is the strongest middle path for an owner-occupier.

*Sources: Arlington Zoning Bylaw §5.4 Use Table (R2 permitted uses, including ADU), §5.8 (NMF overlay provisions, including §5.8.A Site Plan Review, §5.8.B Permitted Uses, §5.8.C Dimensional Controls, §5.8.D Affordable Housing); MA Affordable Homes Act 2024 (c. 150 Acts of 2024, effective Feb 2, 2025) — provides statewide ADU preemption in single-family districts and a dimensional floor (900 sf / 50% rule) applicable statewide.*

| Lead paint disclosure                      | ⚠ Pre-1978 (built 1927) — mandatory disclosure on sale | MA Lead Law (M.G.L. c. 111 §§189A–199B)                    |

There is no historic, environmental, flood, or open-violation friction on this parcel. The only wraparound consideration is the standard pre-1978 lead-paint disclosure obligation that applies to any 1927-built dwelling.

7 · PROCESS PATHWAY — FOR THE MULTI-FAMILY OPTIONS (#8, #9, #10)

| Stage                                  | Body                                   | Est. duration | Indicative soft cost             |
|----------------------------------------|----------------------------------------|---------------|----------------------------------|
| 1. DPCD pre-application meeting        | Planning & Community Development staff | 2–3 weeks     | \$0                              |
| 2. Civil + architect schematic design  | (consultant team)                      | 4–6 weeks     | \$25,000–\$45,000                |
| 3. Site Plan Review submission         | Arlington Redevelopment Board (ARB)    | file day      | filing fee per §5.8.A            |
| 4. ARB public hearing(s)               | ARB                                    | 8–12 weeks    | \$5,000–\$10,000 (legal/expert)  |
| 5. ARB decision + 20-day appeal period | ARB                                    | 4 weeks       | —                                |
| 6. Building permit application         | Inspectional Services Department (ISD) | 4–8 weeks     | permit fee on construction value |
| 7. Construction                        | contractor                             | 10–14 months  | hard costs only                  |
| 8. Certificate of Occupancy            | ISD                                    | 2 weeks       | —                                |

**Total calendar time:** ~10–14 months from pre-application to building permit issuance, plus 10–14 months of construction.

**Total entitlement-stage soft costs:** ~\$30,000–\$55,000.

**Inclusionary set-aside:** Not triggered — this lot's practical unit cap (≤4) is below the 6-unit threshold.

1. **NMF height — 3 stories vs. 4 stories.** Draft warrant article (August 2023) specified 4 stories / 46 ft. ARB / Working Group public discussion indicates this was reduced to 3 stories during adoption. Confirm by reading the consolidated bylaw at the Town Clerk's office or DPCD's published version current as of Article 39 STM April 2025. Envelope math in §4.2 conservatively assumes 3 stories.
2. **Side and rear setbacks of the existing structure.** Computed from GIS parcel polygon edges, not from a stamped survey. A Class I survey is recommended before architectural SD.
3. **Recent comparable permits within 0.25 mi.** Pull from ViewPoint Cloud ([arlington-ma.viewpointcloud.com/explore](https://arlington-ma.viewpointcloud.com/explore)) for a sample of 8–10 recent multi-family or two-family conversions in the Arlington Heights NMF area. Useful for benchmarking ARB hearing outcomes and timing.
4. **Construction cost benchmarks.** Indicative ranges in §7 are entitlement-stage soft costs only. Hard construction cost should be sourced from a local GC quote at the schematic stage; current MA multi-family hard cost is ~\$425–\$525/sf (BCG Q1 2026; RSMeans MA 2026).
5. **Title / easements / open MLC.** Run a current Municipal Lien Certificate and a title rundown before any LOI. Not in scope of this brief.
6. **Elect base vs. overlay.** Per §5.8 the property owner must elect either base R2 or NMF for any given project; the overlay does not stack with the base zoning. The election is project-by-project, not parcel-perpetual.

## 9 · METHODOLOGY & SOURCES

---

### 9.1 Data acquisition

- **Address resolution:** US Census Geocoder (TIGER/Line 2020 benchmark) returned a centroid that interpolated into the abutting parcel's polygon. Authoritative parcel polygon was retrieved by attribute query on Arlington's "Parcels with CAMA" FeatureServer using the assessor's MAP\_PAR\_ID `128.0-0003-0012.0`. This methodology cross-check is what surfaced and resolved the geocoder–parcel discrepancy.
- **Assessor record:** Live HTML scrape of Arlington / Patriot Properties ([arlington.patriotproperties.com](https://arlington.patriotproperties.com)), parsed via the existing `ArlingtonPropertyScraper`.
- **Zoning & overlay:** Spatial query against Arlington's "Zoning\_and\_Overlay\_Districts" FeatureServer with all overlapping features returned (not just the first).
- **Wraparound constraints:** Cross-checked against state-level layers (FEMA NFHL, MA MACRIS) and Arlington-published layers (`LandUse_NonCompliance`, `ArlingtonMA_Wetlands`, `Local_Historic_District`, etc.).

### 9.2 Bylaw / statutory references

- Arlington Zoning Bylaw 2024 ed., §5.4 (R2 dimensional table) and §5.8 (NMF / MBMF overlay provisions).
- Arlington Special Town Meeting May 8, 2024 — adoption of overlay; Article 39 STM April 2025 — amendments.
- M.G.L. c. 40A §3A; EOHLA Compliance Guidelines for §3A (current).
- MA Affordable Homes Act of 2024 (effective February 2, 2025) — ADU statewide preemption.
- M.G.L. c. 111 §§189A–199B (lead paint disclosure).
